OBJECTIVE

To learn How real world works, have experience,& understand the field

EDUCATION

2024 :

LJ engineering College

CS&IT

PROJECT

miniature brts portal (Java) :

Multithreaded Bus Simulation Implemented a Java-based multithreaded application where each thread represents a bus. Threads follow a predefined route, stopping at five stations with a 2-second interval between stations. The program logs the current station for each bus in real time. In case of an error (handled using try-catch), the affected bus is marked as "stopped unexpectedly," and a new bus takes over the route after 2 seconds. This project demonstrates proficiency in Java, multithreading, exception handling, and the use of Thread.sleep() for simulating timed events.

LANGUAGES

JAVA , PYTHON , JULIA , HTML - CSS

INTERESTS

software

ADDITIONAL INFORMATION

familiar with pg-admin & XAMPP for DBMS
